

Remotely monitor your property anywhere, anytime!

Parabeam® Long-Distance Beam Sensors...

Your **business** relies on vital tools, vehicles, machinery, fuel and other resources to operate without interruption. Your **home** should be safe for you and your possessions; so installing an effective system to detect and deter thieves is smart risk-mitigation against disastrous set-backs and in keeping your family safe!

Parabeam® systems are built to an incredibly durable design that delivers on the two most important things:

- 1) Long-term outdoor protection, and
- 2) Performance with accuracy

Parabeam® systems are designed and assembled in New Zealand and works in climatic extremes ranging from a harsh Canadian winter to the penetrating heat of the Australian outback. Originally designed by two Kiwi inventors in 2003, Parabeam® is now in its 15th year and is rapidly becoming the first choice of alarm professionals when wireless perimeter beams are required home and abroad.

Parabeam® requires a **solid** object to interrupt an invisible detection beam for a minimum time (in milli-seconds) before raising an alert. A special pulse counter is used to eliminate activations from all but the most challenging transient disturbances such as birds, rain and falling leaves, for this reason irrelevant triggers are extremely rare especially at night!

Product Highlights

- DIY installation* or by local alarm professional
 - Monitor four beam-sets to one panel
 - Operates on dedicated low UHF band
 - Wireless range from 100m/5000m (obstacle and mode dependent)
 - Repeater available for challenging sites
 - Detection beam span: 40m/300m maximum (model dependent)
 - Panel supports many additional devices such as 4G text messaging; long-range pagers alarm strobes/sirens, lights / etc.
 - Ultra-low false alarm rates compared with passive infrared sensor-based systems
 - 3-year warranty when installed by professional
- *Advanced

COMMON APPLICATION EXAMPLES

- A simple 'gate alarm for convenience or privacy
- Comprehensive farm security
- Vehicle 'over-height' warning systems
- Protecting an orchard or larger perimeter
- Customer service/staff alerting applications
- On remote tracks to address poaching issues
- Health and safety compliance
- Activate an IP camera & works with any installed CCTV system
